

SPECIFICATION AMENDMENT

Page 15, first paragraph:

In FIG. 8 there is illustrated an assembly 14 of three modules 15 mounted in a cradle 12 and prepared for use. The number of modules in the assembly can be selected according to the filtration requirements of the user. If desired, the cradle 12 can be provided with a support structure S for supporting a coverlet C (only a portion of which is shown in FIG. 8), whereby to shield the assembly 14 from the environment (e.g., rain, snow, etc.). Significantly, the use of the ~~skeleton~~ support structure S and coverlet C provides an inexpensive, easy-to-erect shield which may be quickly and easily removed when desired to provide universal access for unit maintenance, filter replacement and assembly reconfiguration.
